

(a)  $\chi^2$  landscape vs  $\gamma_p$  on KiDS-1000

(b) Cosmological bridge: KiDS  $\rightarrow$  SPARC

**KiDS-1000  $\xi_{\pm}$  fit**  
 $\gamma_p = 0.15, \lambda_p = 1.0$   
 $H_0 = 68, \Omega_m = 0.19, \Omega_{m, \text{eff}} = 0.352$

**BPB transport**  
 $R_{\text{BPB}}(k)$ : mean = 1.011  
 $R_{\text{eff}} = 1 + M_p(a)[R_{\text{BPB}} - 1]$   
 $\delta R_1(M) = R_{\text{eff}}(M; A = 1) - 1$

**SPARC rotation curves (Paper II)**  
 $\Delta\chi^2 = -2677$  on 38 active gal.  
LOO  $p = 0.003$ , Cohen  $d = 1.44$
